Vienna, Austria

Professional Summary

Results-driven **Senior Software Engineer with 8+ years of experience** architecting and delivering scalable, high-performance web applications and microservices across **BFSI, Supply Chain, and Energy** sectors. Expert in full-stack development using **C#, TypeScript, JavaScript, and SQL**, with production exposure to **Rust and Java**. Proven track record applying microservices patterns, distributed systems principles, and robust test automation to ship resilient, low-latency platforms for mission-critical operations. Experienced in accelerating product velocity by engineering enterprise AI integrations, including **Model Context Protocols (MCPs) and LLM workflows**.

Skills & Technologies

- **Programming Languages:** C#, TypeScript, Java, JavaScript, SQL, Rust.
- **Frameworks & Tools:** .NET, Web API, REST APIs, SignalR, Azure Service Bus, gRPC, MUI, PNPM, Electron, AGGrid.
- **Frontend:** React**,** Angular, HTML, CSS, SASS, nx, monorepo, Monaco Editor, Vite.
- **Databases**: SQL Server, MongoDB, SQLite, Parquet, Azure Blob Storage.
- **DevOps:** Azure CI/CD, Open Telemetry (Distributed Tracing), Docker, YAML, NUKE, Kubernetes, Helm chart, GitHub Actions.
- **Testing:** xUnit, Unit Testing, Integration Testing, End-to-End Testing, Jest, Vite**.**
- **AI**: MCPs, Skills (for customer), Cursor AI, Claude, GitHub Copilot.
- **Other**: Data Structures & Algorithms, Big data, Azure Cloud (Key vault), Snyk.

Work Experience

Senior Software Engineer – Tricentis | Vienna, Austria | June 2024 – Present

- **AI-Powered Product Integration & MCPs:** Engineered and delivered custom Model Context Protocols (MCPs) to bridge LLMs with hybrid cloud and on-premise test environments, integrating end-to-end capabilities—automated schema discovery, Natural Language-to-SQL synthesis, and automated test-case generation—slashing test authoring time and manual query friction for enterprise clients**.**
- **Decoupled Event-Driven Messaging & Real-Time Sync:** Architected an enterprise pub/sub messaging and notification pipeline using Azure Service Bus, a dedicated Notification Service, and SignalR (WebSockets), propagating connection state updates from users and automated MCP tool calls to web clients with debounced re-fetch and live UI refresh**.**
- **Industry-Leading Data Reconciliation Engine:** Maintained, enhanced, and resolved critical production bugs for Tosca DI's industry-leading Row-by-Row comparison engine—

a benchmark verification tool capable of reconciling 100+ GB datasets with high precision across SQL databases, Apache Hive, and heterogeneous file formats (CSV, Excel, Parquet, Avro).

- **Enterprise CI/CD & Deployments:** Engineered a future-proof, multi-stage, and multi-region Azure DevOps CI/CD pipeline using Infrastructure as Code (IaC) via Nuke, Helm charts and Kubernetes, optimizing deployment predictability and ensuring high availability across global cloud environments**.**
- **Enterprise Test Intelligence & Standup Dashboard:** Engineered a GitHub Actions post-execution reporting pipeline and interactive GitHub Pages dashboard (visual pie charts and accordion drill-downs) for 1,396+ nightly regression test runs; scaled adoption across 19 engineering teams at Tricentis as the primary daily standup review platform for developers and testers to rapidly triage failures and unblock releases.
- **Cloud & Micro-Frontend Architecture: Architected a**nd deployed multiple scalable micro-frontends and backend microservices for a multi-tenant cloud application, significantly enhancing platform modularity and user workflow efficiency.
- **Interactive SQL Playground & Tooling:** Engineered an interactive web-based SQL playground micro-frontend using the Monaco Editor, enabling users to write, format, and execute live queries with real-time syntax validation, IntelliSense, and low-latency result rendering.
- **Connection Management Service & UI:** Engineered a high-throughput Connection Management service for Tosca using MongoDB to reliably store and query heterogeneous enterprise data source configurations, and built the responsive connection management dashboard using Material UI (MUI) Grid.
- **Backend & Observability**: Implemented a robust backend architecture using .NET 8 integrated with **OpenTelemetry** and Azure Distributed Tracing, prioritizing high-availability, end-to-end system observability, and reliable data-integrity workflows.
- **High-Performance Desktop Tooling:** Maintained and enhanced a mission-critical desktop reporting tool, utilizing Rust for low-latency, memory-safe data processing paired with an Electron frontend.

Senior Software Engineer – International Atomic Energy Agency (via e-Zest) | April 2023 – May 2024

- **Full-Stack Ownership:** Enhanced and maintained the mission-critical **SAFIRE** reporting application using .NET Core, Angular, and SQL Server, ensuring maximum availability for international nuclear inspectors.
- Led the end-to-end analysis and delivery of 10+ core features, strengthening the quality control framework and decreasing data validation errors by 25%.

Module Lead – **LTIMINDTREE** | **Mumbai, India | April 2021 – April 2023**

- **Compliance Engineering:** Engineered a full-stack Remote Worker Assessment web application for Deloitte (U.S.) using .NET and Angular, guaranteeing 100% regulatory compliance across 15+ international labour laws.
- **System Design:** Actively drove full-stack feature development with a core focus on application security, performance optimization, and microservices decoupling**.**

Senior Software Engineer – **GEP WORLDWIDE | Mumbai | September 2019 – April 2021**

- **Logistics Visualization:** Integrated Azure Maps with the Control Tower UI, providing real-time logistics tracking that successfully reduced client shipment queries by 25%.
- **UI Reuse & Analytics:** Created reusable UI frameworks for core Control Tower and Demand Planning projects, designing interactive dashboards to visualize complex historical and forecasted datasets.
- **Data Strategy:** Designed high-performing data visualization and ingestion mechanisms using NoSQL database architectures**.**

Jr Software Engineer – **TSS CONSULTANCY | Mumbai, India | April 2018 – September 2019**

- **Cryptography & Cross-Platform Security:** Architected banking security modules using Digital Certificates and Public/Private key cryptography, bridging cryptographic algorithms across Java and .NET environments to eliminate data-in-transit vulnerabilities**.**
- **CRM Development:** Built a consolidated CRM application that unified fragmented customer datasets into a single, high-integrity transactional database.

Software Engineer – **AUM INSURANCE BROKERS | Mumbai, India | June 2017 – April 2018**

- **E-Commerce Platform & API Integration:** Designed and developed TakeAPolicy.com, a public-facing insurance portal integrating vendor REST APIs for real-time policy comparison and automated transactions**.**

Education

Bachelor of Computer Science – University of Mumbai | 06/2012 – 05/2016

Awards & Achievements

- **Rapid Advancement at Tricentis**: Formally promoted to Senior Software Engineer in January 2026, recognizing impactful engineering contributions across cloud, desktop, and AI initiatives within 19 months of joining**.**
- **Accelerated Promotion:** Formally promoted from Software Engineer to Senior Software Engineer at GEP Worldwide within 12 months of tenure (Q4-2020).
